

Video Technology for schools

Make every day a safe school day

Provide a safe and positive environment for students and staff with easy-to-use video technology.

Milestone

One product suite meets multiple needs

Go beyond preparedness to proactive campus management.

Easy to deploy and use, our software enhances school security, enables rapid incident resolution and delivers actionable insights into your school — providing peace of mind for your staff and students.

XProtect

The VMS trusted in over 500,000 customer sites worldwide

XProtect enables you to prevent, predict and immediately react to potential issues on campus. It lets you customize video solutions integrating cameras, sensors, AI and analytics to better handle security and curb unwanted behavior. All while ensuring compliance considerations such as the right to privacy.

With Milestone XProtect at the heart of your video solution, you can monitor your entire school campus — from hallways to playgrounds to parking lots.

Arcules

Our simple, cloud-based VSaaS

XProtect is complemented by our cloud video surveillance as a service option, Arcules. This scalable, plug-and-play solution is remarkably simple to set up and operate.

Like XProtect, it's an open platform, so you can choose from more than 6,000 cameras and a variety of optional analytics. And if you are already using XProtect, Arcules enables you to expand to other sites with minimal effort or investment.

BriefCam

Video analytics for safer, smarter schools

Typically, manual forensic review of archived video footage is time-consuming — the more footage there is, the longer it takes. BriefCam advanced video analytics enables fast, filtered searches across multiple cameras.

Swift review of post-incident footage can be used to validate claims, reduce litigation risk and better understand incidents. It also provides clear visibility into building occupancy patterns and student flows, helping administrators make informed decisions that enhance the school experience.

Stay a step ahead, take control of campus safety

Students and parents rely on school administrators to ensure a safe and positive learning environment. You can provide that with the Milestone product suite.

Enhance security

With XProtect or Arcules you can monitor your entire school campus — from hallways to playgrounds to parking lots — to prevent, predict and immediately react to potential issues on campus.

Stay informed, act fast

Use real-time alerts, intelligent video analytics, and streamlined video review to swiftly resolve incidents.

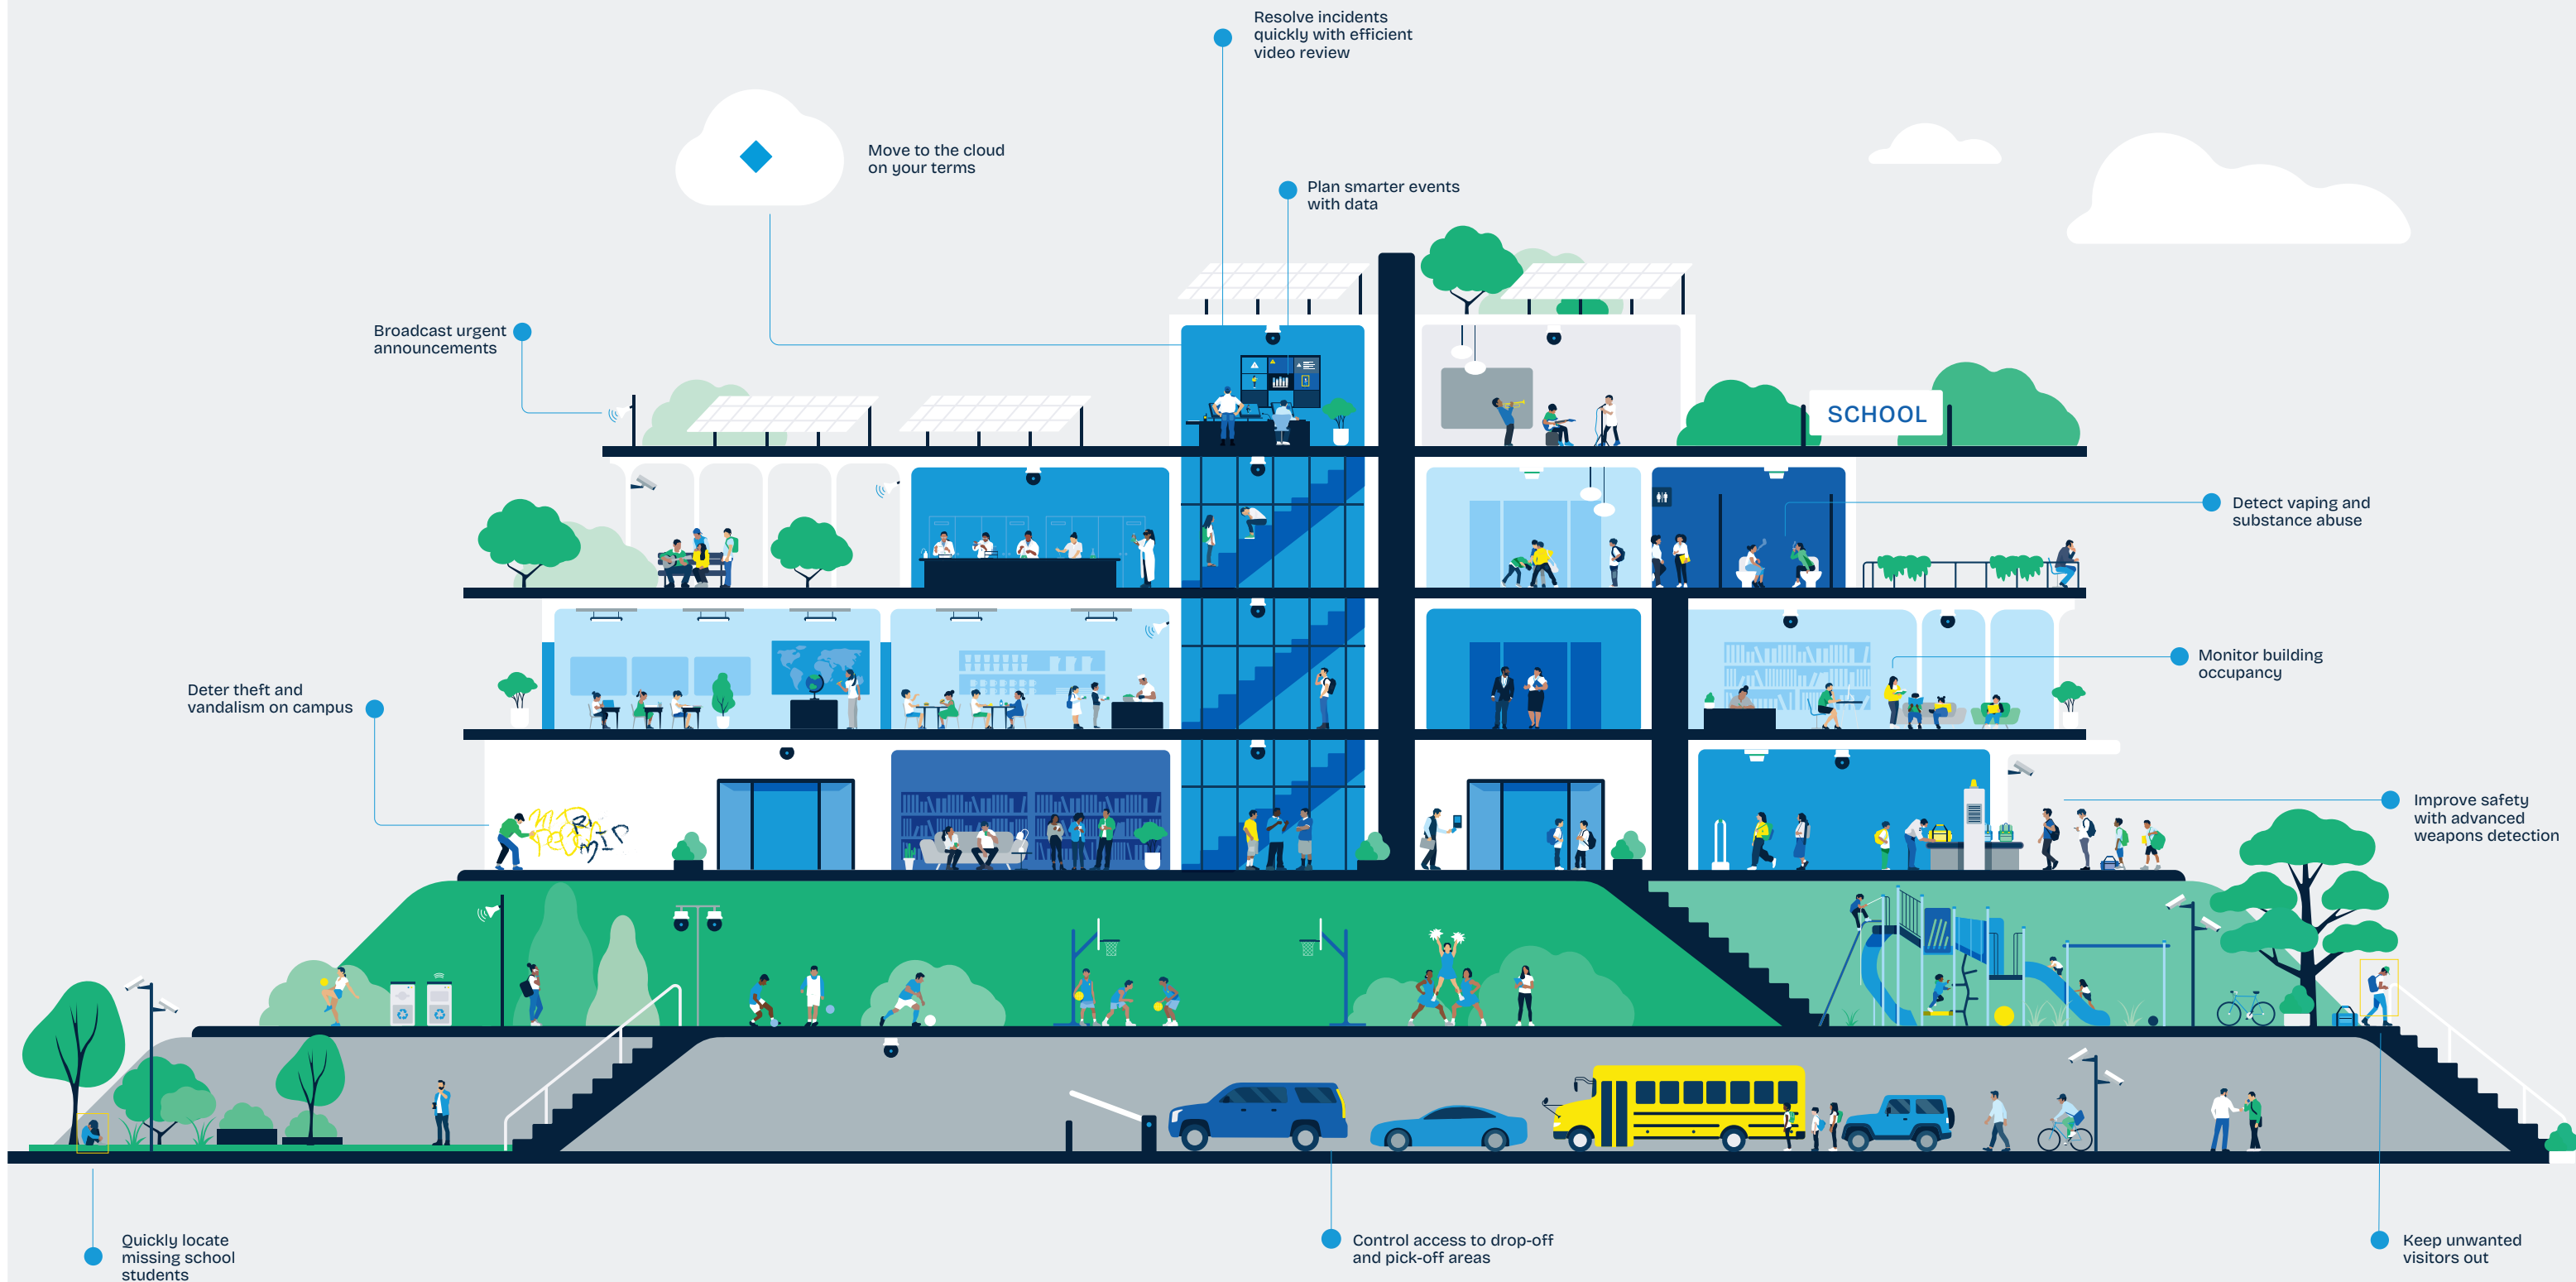

Improve decision-making

Gain valuable insights into building occupancy, people crowding and traffic congestion and improve decision-making with BriefCam video analytics.

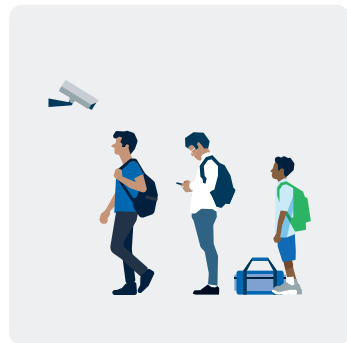

Meet your school challenges with proven video technology

Discover how Milestone's video technology can address challenges related to security, access control, and overall campus management. Explore the solutions that can help you create a secure, nurturing atmosphere for learning.

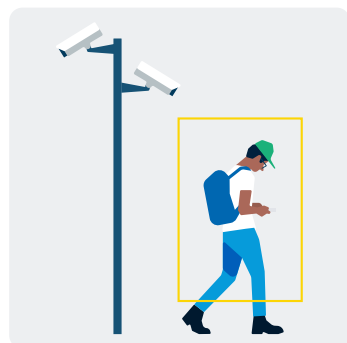

Proactive protection and optimization

Elevate your school's safety and efficiency with video technology, AI and analytics. From quick threat detection to secure campus access and proactive safety measures, ensure security for students, staff and visitors.

Improve safety with advanced weapons detection

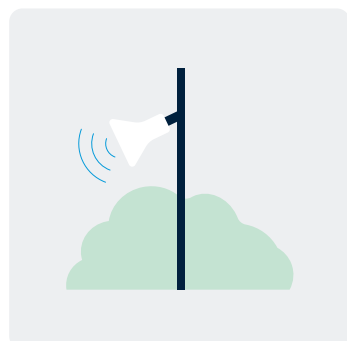

There is increasing concern over school shootings and the devastating impact they have on communities in the US. It is vital that primary and secondary schools take proactive measures to prevent guns from entering their school campuses. XProtect VMS is compatible with third-party gun detection technologies. This combination can improve overall school safety while supplying high-quality video footage for forensic purposes, supporting first responders and investigators.

Keep unwanted visitors out

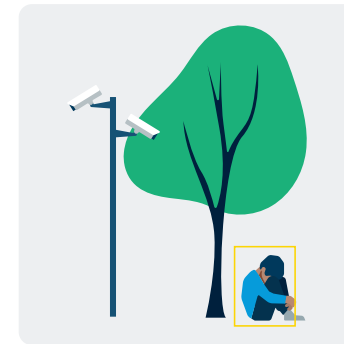

Maintaining a secure school environment optimal for learning requires failsafe access control to protect students, staff and the premises.

XProtect VMS and Arcules VSaaS integrated with access control systems enable the security team to monitor access points in real time and take immediate action if unauthorized attempts are detected.

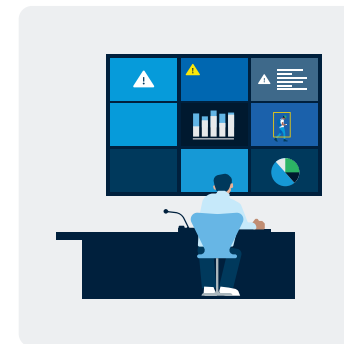

Broadcast urgent announcements

An imminent threat — such as severe weather or an active assailant — may call for a lockdown. This often calls for a school-wide announcement within seconds. Broadcast live or pre-recorded emergency messages directly to every classroom via network speakers or in-built camera speakers — turning your video system into an efficient communication tool during critical situations.

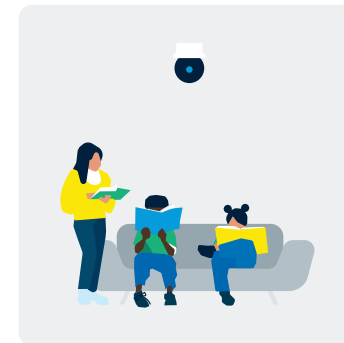

Quickly locate lost or missing students

Missing person cases are always time sensitive. Yet such investigations often require many staff members to work for hours or days. By combining XProtect and BriefCam Review, investigators can leverage the multi-camera search to quickly find a person of interest and locate their last whereabouts caught on camera, ensuring the students' safety.

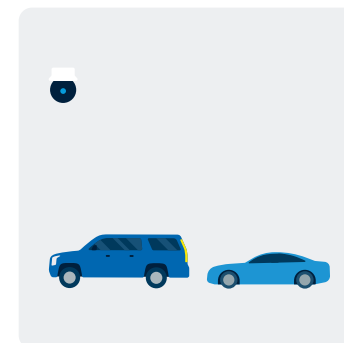

Plan smarter events with data

Large events at schools require security officers to be aware of potentially problematic situations so they can respond as soon as possible. XProtect combines with BriefCam analytics to send real-time alerts when crowds grow too large or parking areas fill up. Your security team can respond instantly, keeping events running smoothly while focusing resources exactly where they're needed.

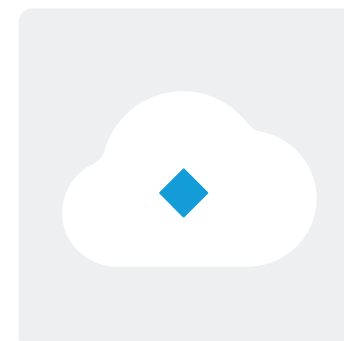

Monitor building occupancy

The security and operations team can't be everywhere at once, yet they must ensure that building occupancy limits are not exceeded to ensure compliance with health, safety and fire codes. XProtect integrates with BriefCam to track building occupancy in real time, monitoring entrances and exits in facilities such as gyms, theaters and auditoriums. Security managers can receive alerts when occupancy exceeds limits and analyze long-term trends to anticipate peak times, enabling proactive crowd management.

Secure drop-off and pick-up areas

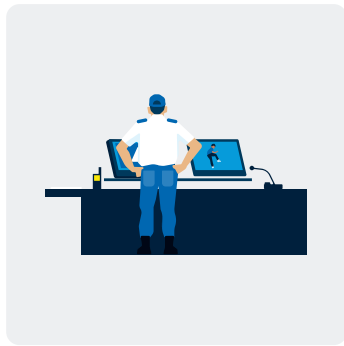

With a mix of children, visitors, teachers and vehicles, keeping a clear overview of the pick-up and drop-off area can be challenging. Video surveillance recordings are a valuable tool in verifying the details of an incident or checking who picked up a child. Security can be further enhanced with license plate-controlled access to the area, ensuring that non-authorized vehicles are not allowed to enter.

Move to the cloud on your terms

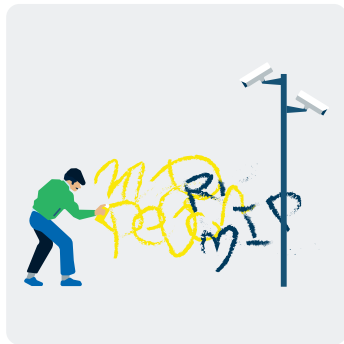

Schools often face limitations relating to on-premises storage capacity, bandwidth constraints and system complexity.

XProtect is an excellent choice for larger schools, while Arcules, our cloud solution, is perfect for smaller institutions that prioritize easy deployment and operation. For a more versatile security approach, XProtect and Arcules can be integrated to combine the benefits of on-premises and cloud video management.

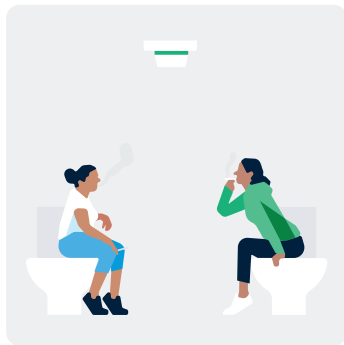

Review footage faster

When an incident occurs on a school campus, like an altercation between students or a security breach, swift resolution is critical. Conventional video monitoring systems often demand manual sifting through hours of footage. By combining XProtect and BriefCam Review, investigators can use the VIDEO SYNOPSIS technology to review hours of footage in minutes, significantly reducing man-hours and investigation time.

Deter theft and vandalism

Primary and secondary schools face the ongoing challenge of protecting their facilities from theft and vandalism. XProtect steps in with tailored solutions. Video technology combined with strategically positioned cameras that monitor crucial spots like entrances, hallways, and parking lots has a deterrent effect on crimes and unwanted behavior. Integrating XProtect with access control further strengthens security, fostering a secure environment that ensures the well-being of students, staff and visitors.

Detect vaping and substance abuse

Incidences of vaping, smoking, and substance abuse in primary and secondary schools are on the rise. These activities often occur in areas such as restrooms, where installing cameras for monitoring would breach privacy rules. Vape and smoke detection sensors, integrated with Milestone's XProtect and Arcules can detect vaping, smoking and air quality changes without capturing personal information and can immediately send alerts to school staff for intervention.

Milestone Care™ — reliable support for your school

Be confident your solution is protected with the software maintenance and support program for XProtect. Milestone Care will help you safeguard your product over its lifetime, protect your investment, and monitor and streamline daily operations.

Packages to suit your school's needs

Every school is different, and that's why we offer different Milestone Care packages to suit your specific requirements.

Milestone Care™ Plus

Built to offer peace of mind and improve daily operations.

XProtect Remote Manager

Access to product updates

Full trade-in on product upgrades

Access to connected services features

If you need more support, Care Premium extends the benefits of Care Plus

Milestone Care™ Premium

Extends the benefits of Care Plus with direct, prioritized customer support.

Direct and prioritized 24/7 customer access to Milestone Technical Support

Committed response times

Support in selected languages for product updates

Why Milestone?

Get the Milestone advantage

You can be confident in Milestone's video technology, which is proven in hospital sites worldwide – as well as our global support and partner networks.

Open platform

Limitlessly integrate functionality from our network of technology partner solutions and add additional value to your system.

Future-proof system

Get the freedom to scale up your system with our seamless license model that allows adding more devices and servers when it's time to expand.

Easy onboarding

Use your staff where they are needed, not in long training sessions. Customized materials designed for medical staff make the onboarding process smooth.

Stay cybersecurity

Tiered administrator and user rights, as well as strict IT security procedures, are just two reasons why XProtect is the right fit for schools with a focus on cybersecurity.

Connect any camera

With support for more than 15,000 cameras and devices, you can choose the ones that suit your needs and budget.

Proven security track record

Rely on our 25 years of experience, with solutions proven in 500,000+ customer sites.

Cybersecurity you can trust

Our approach to cybersecurity is a carefully developed and proven combination of features, expertise, training, and close collaboration with you. Among other features, XProtect offers:

Encryption

Enhanced security and protection against unauthorized access to sensitive video data with encryption and password protection of video databases and exports.

User rights management

Ensure that only authorized personnel can view sensitive information with strict and time-controlled user rights management.

Third party safety

Get increased security by ensuring that all third-party applications integrated via Milestone Integration Platforms are fully authenticated and authorized.
